## Role of Teacher Educator in Viksit Bharat@2047

**Dr. Ramesh Yanamashetti**

Associate Professor

B.V.V. Sangha's College of Education (B.Ed. & M. Ed), Bagalkote-587101. Karnataka.

### Introduction

The term 'Viksit Bharat' means 'Developed India'. Viksit Bharat 2047. In 1947 we got freedom from British, but still today only we are not free from self Education. The Gurukul method placed a strong priority on the interaction between instructor and student and provided each student with specialized teaching tailored to their needs. In contrast, modern educational institutions mainly rely on lectures in the classroom and standardized assessments.

By investing the same passion in their students' futures, educators today also contribute to the nation's empowerment via education. A teacher's responsibilities extend beyond merely instructing students. Beyond the classroom, educators have a duty to instill in their students a sense of civic and social responsibility as well as the ability to contribute to the betterment of society. These pupils will provide the foundation for society's advancement in the future. Thus, the most crucial element of the educational system is the teacher. The teacher is the key to achieving the goals and aspirations that society wants to achieve through education. It is the duty of educators to carry out the goals and intentions of the country and society.

## Four Best 'A' Build Viksit Bharat

In Viksit Bharat, 4A is very important: 1st A is Apple, which is Adam; 2nd A is Apple, which is Isaac Newton, who gave the gravitational theory; 3rd A is Apple, which is Steve Jobs, who rolled the word from his technology; and finally, 4th A is Apple, which is AI, or artificial intelligence. By using A or AI, our teachers make changes in the education system in Viksit Bharat.

## Role of Teacher Educator

In the fictitious scenario Viksit Bharat@2047, which imagines an advanced and developed India by 2047, teacher educators will play a critical role in determining the direction of education in the future. These are a few essential facets of their role:

**Professional Development:** It would be the duty of teacher educators to keep their own subject matter expertise, educational technologies, and teaching approaches up to date. For instructors in practice, they would act as role models for lifelong learning.

**Curriculum Design and Innovation:** They would aid in the creation of an engaging and timely curriculum that promotes creativity, critical thinking, problem-solving, and other 21st-century abilities. This would entail keeping up with the most recent findings and developments in education.

**Mentorship and Support:** In order to help new teachers navigate the challenges of the profession, create successful teaching practices, and control classroom dynamics, teacher educators would offer mentorship and support.

**Research and Scholarship:** To find best practices, evaluate the potency of instructional techniques, and add to the corpus of knowledge in the field of education, they would conduct educational research. Their pedagogical techniques would be informed by this research, which would also help them spread evidence-based practices.

**Advocacy and Policy Development:** Policies that promote teachers' professional development, better their working environments, and raise educational standards are what teacher educators would endorse. They would work together to influence national, regional and local education policies along with legislators, academic institutions, and other interested parties.

**Promotion of Inclusive Education:** They would advocate for inclusive educational methods that cater to a variety of students, such as those from underprivileged origins, linguistic minorities, and special needs. This would entail developing inclusive teaching methods and assisting educators in establishing inclusive classrooms.

**Technology Integration:** In order to enable teachers to use digital tools for individualized instruction, collaborative learning, and evaluation, teacher educators would support the integration of educational technology into teaching and learning processes.

**Community Engagement:** They would work together to create solid alliances that promote the academic success and general wellbeing of students with parents, neighborhood associations, and other stakeholders. Organizing workshops, seminars, and other community outreach events could be one way to integrate the community in educational endeavors.

In order to promote positive change in the educational system, a teacher educator in Viksit Bharat@2047 would need to possess a variety of talents, including leadership, pedagogical knowledge, and a dedication to lifelong learning.
